                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 12, Application US/08961240

Patent No. 5830715

GENERAL INFORMATION:
APPLICANT: KUDOTA, Michio
APPLICANT: HATORI, Keiji
APPLICANT: HATORI, Kazuko
TITLE OF INVENTION: ENZYME, ENGODING ENZYME, RECOMBINANT DNA AND
TITLE OF INVENTION: ENZYME, TRANSFORWANT, AND THEIR PREPARATIONS AND USE
CORRESPONDENCE ADDRESS:
ADDRESSEE: BROWDY AND NEIMARK
STREET: 419 Seventh Street, N.W., Suite 300
CITY: Washington
STATE D.C.

Biosci. Biotechnol. Biochem. 60:717-720(1996).
-- CATALYTIC ACTIVITY: Hydrolysis of alpha-(1->4)-D-glucosidic linkage in 4-alpha-D-((1->4)-alpha-D-glucanosyl)(n) trehalose vield trehalose and alpha-(1->4)-D-glucan.
-- PATHWAY: Trehalose biosynthesis.
-- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO KNOWN AS THE ALPHA-AMYLASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GIFKLWAPYVNSVKLKLSKKLIPMEKN-----DEGFFEVEIDDIEENLTYSYIIE-DKR

Maruta K., Hattori K., Nakada T., Kubota M., Sugimoto T., Kurimoto
"Cloning and sequencing of trehalose biosynthesis genes from
Arthrobacter sp. Q36.";
Biochim. Biophys. Acta 1289:10-13(1966).
-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(1->4)-D-glucosidic
linkage in 4-alpha-D-((1->4)-alpha-D-9lucanosyl)n trehalose to
yield trehalose and alpha-(1->4)-D-glucano.
-!- PATHMAY: Trehalose biosynthesis.
-!- PATHMAY: TRELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
KNOWN AS THE ALPHA-AMYLASE FAMILY.

                                                       OF REDUCING SUGAR. SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in oligosaccharides and polysaccharides.
PATHWAY: POLYSACCHARIDE DEGRADATION.
                                                                                                                                                                                                                                                                                                                                        Indels 178;

                                                                                                              -1- PATHWAY:
-1- SUBUNIT: MONOMER.
-1- SUBUNIT: MONOMER.
-1- SUBUNIT: MONOMER.
-1- TISSUE SPECIFICITY: HIGHEST LEVELS FOUND IN LIVER AND MUSCLE.
-1- DISEASE: DEFECTS IN GREL ARE THE CAUSE OF GLYCOGEN STORAGE DISEASE
-1- V (GSD-IV) (ALSO KNOWN AS ANDERSEN'S DISEASE); A RARE FORM OF GLYCOGENOSIS CHARACTERIZED BY THE ACCUMICATION OF ABNORMALLY
STRUCTURED GLYCOGEN THAT RESULTS IN EARLY ONSET HEPATIC CIRRHOSIS,
CARDIAC ARREST AND NUMBORNOSCULAR DISEASES. MOST CHILDREN WITH THIS
CONDITION DIE BEFORE TWO YEARS OF AGE. NO TREATMENT APART FROM
LIVER TRANSPLANTATION HAS BEEN FOUND TO PREVENT PROGRESSION OF THE
DISEASE.
-1- SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
KNOWN AS THE ALPHA AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          135 TGIELMPVAQFPGNRDWGYDGVFLYAVQNTYGGPWELAKLVNEAHKRGIAVILDVV---- 190
